Profile

Software engineer with 3+ years building production systems in education technology, with a background in mathematics and CS education that informs how I think about learning tools, equity, and what students actually need. I work closely with product and cross-functional teams to ship reliable, impactful software.

Technical Skills

Backend & APIs: Python (FastAPI, async/await, Pydantic), Node.js/Express, REST APIs, distributed systems

Cloud & DevOps: AWS (S3, SQS, EC2, RDS), Docker, CI/CD, GitHub Actions, cloud-native systems

Testing: Jest, automated testing, WebdriverIO

Data & Pipelines: PostgreSQL, DynamoDB, async task workers, data pipelines, streaming data processing, schema design, query optimization

Engineering Practices: End-to-end ownership, code review, testing, observability, documentation, distributed debugging

Product Thinking: Collaborating with product teams, UX researchers, understanding user needs, shipping features that matter

Professional Experience

Software Engineer - Multiverse

05/2021 – 07/2024

AI Education Tech Start-up

- Built the skills roadmap feature on the learning management platform for onboarding apprentice software engineers; owned the full feature from scoping through production release.
- Designed and maintained FastAPI backend serving enterprise customers at scale; built data ingestion pipelines and an async audio transcription pipeline that reduced administrative work for coaching teachers by 50%.
- Collaborated closely with product and design teams to understand learner and educator needs; shipped features that drove real engagement and learning outcomes.
- Owned system reliability and performance — optimized for latency and cost tradeoffs; ensured graceful failure modes for edge cases.
- Wrote reliable, testable, observable code that shipped to production serving millions of students; participated actively in code reviews to raise team quality.

Computer Science Teacher - New York City Department of Education

09/2013 – 06/2020

- Authored the school-wide computer science curriculum, designing scope and sequence, lesson materials, and assessments from the ground up.
- Built a college pipeline program to help students enter CS majors, connecting students with resources, mentorship, and application support.
- Sourced funding and technology from local and national organizations to build out computer labs and launch student clubs — including Unity, Ableton, and Adobe — expanding access to hands-on CS courses school-wide.

Volunteer

Software Engineer - New Jersey Parent Caucus

09/2024 – Present

Legal Service Non-Profit

- Built production inference pipeline using OpenAI APIs with system prompts, function calling for structured extraction, and guardrails; processes hundreds of unstructured documents and audio transcriptions daily.
- Engineered distributed system — Python async task workers orchestrate inference jobs, PostgreSQL stores results and context, REST APIs surface insights to end users, React UI enables exploration.
- Designed for real-world data challenges — hallucination detection, retrieval misses, latency optimization, graceful degradation; ensured system remained reliable as data volume and complexity grew.
- Collaborated with non-technical stakeholders (legal aid staff) to understand their workflows and iterate on inference outputs; coached them on prompt tuning and system capabilities.

Member - Leopard.fyi

05/2025 – Present

Women's Engineering Collective

- Facilitated technical talks and study groups for engineers across experience levels.
- Scoped and led collaborative projects focused on teaching engineering best practices through hands-on work.

Education

Master of Computer Science — AI & ML Concentration

Part-time | Expected 2027

Georgia Institute of Technology

Master of Mathematics

Hunter College (CUNY)

Software Engineering

Fullstack Academy

Certifications

AWS Certified Cloud Practitioner

Amazon Web Services

New York State Professional Teaching License — Computer Science

New York State Education Department
